TREATMENT WITH DONATED EGGS

TREATMENT WITH DONATED EGGS

The treatment cost includes nurse-led planning, scans and blood tests during treatment, sperm preparation, your chosen donated eggs, embryo creation (including ICSI when frozen eggs are used), extended embryo culture, and a fresh embryo transfer. It also includes a pregnancy scan or post-treatment review appointment, along with access to counselling support.

To secure your chosen eggs and arrange their transfer to your Care Fertility clinic, we require a £1,180 reservation fee. We can only guarantee the availability of your selected eggs for three months. If they are not used within this time, they may no longer be available. This fee is non-refundable, but can be used against any future treatment with us.

RECIPIENT SPECIALIST CONSULTATION	£195.00
REGISTRATION FEE - EGG RECIPIENT We charge a one-off, non-refundable fee to cover the time we invest in working with you to identify a suitable donor.	£585.00
A STANDARD SET OF FROZEN DONATED EGGS FROM THE CARE FERTILITY EGG BANK A minimum of six eggs per set, inclusive of the reservation fee.	£9,800.00
A LARGE SET OF FROZEN DONATED EGGS FROM THE CARE FERTILITY EGG BANK A minimum of nine eggs per set, inclusive of the reservation fee.	£12,825.00
EGG RECIPIENT FRESH DONATED EGGS Nine eggs per fresh donation cycle. If there are fewer than nine eggs, then a refund of £3,000 will be given.	£14,000.00
EGGS FROM A KNOWN DONOR This fee excludes the cost of the donor's initial consultation, pre-consultation screening tests, infectious screening tests, and medication.	£8,735.00
HFEA FEE CHARGED PER EMBRYO TRANSFER	£100.00

TREATMENT WITH DONATED EMBRYOS

FROZEN EMBRYO TRANSFER WITH DONATED EMBRYOS

The cost includes infectious screening for the egg and sperm providers, along with their preparation and support for donation. It also covers allocation of the embryos and transfer to your chosen clinic, nurse-led planning with one of our fertility specialists, monitoring scans, blood tests during treatment, the first embryo transfer, a pregnancy scan or post-treatment review appointment, and access to counselling support.

If a frozen embryo does not survive the thawing process, you may be eligible for a partial refund — please see our terms and conditions for full details. The cost of storage and medication is not included.

SPECIALIST RECIPIENT CONSULTATION	£195.00
REGISTRATION FEE We charge a one-off, non-refundable fee to cover the time we invest in working with you to match you with your embryo donor.	£585.00
TREATMENT WITH 1 FROZEN DONATED EMBRYO	£4,485.00
TREATMENT WITH A SET OF TWO FROZEN DONATED EMBRYOS This includes reserving two donated embryos. After the first embryo transfer, a frozen embryo transfer fee will apply.	£5,615.00
TREATMENT WITH A SET OF THREE FROZEN DONATED EMBRYOS This includes reserving three donated embryos. After the first embryo transfer, a frozen embryo transfer fee will apply.	£6,735.00
FROZEN EMBRYO TRANSFER WITH DONATED EMBRYOS	£2,965.00

TREATMENT WITH DONOR SPERM

DONOR SPERM	
DONOR SPERM Includes donor matching, reservation and transfer of donor sperm to your chosen Care Fertility clinic and donor sperm for one treatment cycle.	£1,380.00
IMPORT OF DONOR SPERM PURCHASED FROM A PARTNER SPERM BANK (INCLUDES ONE YEAR'S STORAGE).	£415.00
KNOWN SPERM DONATION This includes genetic and clinical history assessment of the known sperm donor, semen analysis, a donation consultation, infectious and genetic screening, counselling, completion of consents, sperm processing and freezing, a quarantine period with post-quarantine infectious screening, payment of donor expenses, and one year's storage. The cost of treatment using the frozen donor sperm is not included.	£5,220.00

REFUNDS

If, for any reason, your known donor does not complete the donation process, you'll receive a partial refund of the known donor fee. The amount refunded depends on the stage at which the donor withdraws.

- A £4,005 refund will be issued if the donor completes initial donation steps (such as counselling and assessment) but does not proceed to infectious screening. This may happen if no sperm are found at semen analysis, or if the donor decides not to continue.

- A £1,025 refund will be issued if the donation process cannot be completed after initial screening but before post-quarantine screening.

Once the donor has completed post-quarantine screening following sperm freezing, no refunds are payable.

SHARED MOTHERHOOD / PARENTHOOD

SHARED MOTHERHOOD / PARENTHOOD The treatment cost includes a consultation with a donation expert, implications counselling, specialist guidance on parenthood consent, nurse-led planning, monitoring scans for both partners, blood tests during treatment, donor sperm preparation, extended embryo creation, culture, and access to counselling support. Please note: the cost of any additional frozen embryo transfers is not included.	
SHARED MOTHERHOOD / PARENTHOOD This cost also includes a egg collection with conscious sedation or local anaesthetic, fresh embryo transfer, a pregnancy scan or a post-treatment review appointment.	£7,205.00
SHARED MOTHERHOOD/ PARENTHOOD - ELECTIVE FREEZE ALL The cost also includes egg collection with conscious sedation or local anaesthetic, embryo freezing and the first frozen embryo transfer, if this takes place within 12 months of treatment.	£6,550.00
SHARED MOTHERHOOD/ PARENTHOOD USING OWN FROZEN EGGS The treatment cost also includes thawing of eggs, ICSI, and a fresh embryo transfer. Please note: the cost of any additional frozen embryo transfers is not included.	£5,690.00
FROZEN EMBRYO TRANSFER (FET) - INTENDED SHARED MOTHERHOOD / PARENTHOOD CYCLE The cost includes nurse-led planning, monitoring scans, blood tests during treatment, embryo thawing, culture, and transfer, a pregnancy scan or post-treatment review appointment, and access to counselling support.	£2,900.00
FROZEN EMBRYO TRANSFER (FET) - INTRA-PARTNER DONATION (ELECTED SHARED MOTHERHOOD / PARENTHOOD) For patients who have embryos in storage and wish to transfer them to their partner, the cost includes a consultation with a donation expert, implications counselling, and specialist guidance on parenthood consents. It also covers nurse-led planning, monitoring scans, blood tests during treatment, embryo thawing, culture, and transfer, a pregnancy scan or post-treatment review appointment, and access to counselling support.	£3,245.00
HFEA FEE - CHARGED PER EMBRYO TRANSFER	£100.00

MEDICATION COSTS

MEDICATION COSTS

MEDICATION FOR THE EGG PROVIDER

The cost of medications for the person providing the eggs (known donor) or the partner providing eggs (shared motherhood) ranges from between £1,021 and £2,873. The exact cost depends on the recommended dose, which is tailored to each patient based on their individual medical history and blood test results. 79% of patients have medication costs between £1,021 and £2,065. We'll always confirm the exact cost of your medication before you decide to start treatment.

Up to one third of women may develop OHSS during stimulation; if this occurs additional medications may be required to reduce the severity of this. These additional medications may cost up to £406.

FOR THE EGG RECIPIENT

This applies to the shared motherhood recipient, known egg recipient, and embryo recipient (the partner or individual having the embryo transfer).

People having an embryo transfer are typically prescribed medication to prepare the womb lining for implantation. The cost of this medication usually ranges from £179 to £500, depending on the type and dose recommended for you.

Our research shows that around 33% of patients don't absorb enough progesterone from pessaries alone. In these cases, we recommend injectable progesterone, known as rescue luteal support. The typical cost of this extra progesterone is around £256 until pregnancy test and if the test is positive, it will need to be continued for several more weeks, at an additional cost of up to £896.

SCREENING

SCREENING	
INFECTIOUS SCREENING UK law requires anyone providing eggs or sperm for treatment to have screening for HIV and hepatitis three months before their first treatment cycle, and then every two years after that. This is a requirement for all UK fertility clinics, so we recommend factoring the cost of these tests in when comparing prices. If you're new to Care Fertility and already have recent test results, you may not need to repeat this screening.	
INFECTIOUS SCREENING FOR THE SPERM PROVIDER	£235.00
INFECTIOUS SCREENING FOR THE EGG PROVIDER AND PERSON HAVING TRANSFER (IF DIFFERENT) For shared motherhood/parenthood, both partners will require screening.	£242.00
INFECTIOUS AND GENETIC SCREENING FOR YOUR KNOWN DONOR The law requires all clinics to perform infectious and genetic screening for an egg donor. All screening is required initially and infectious screen is required in every cycle of stimulation.	£1,664.00

FREEZING AND STORAGE

FREEZING AND STORAGE	
FREEZING OF EMBRYOS REMAINING AFTER FRESH EMBRYO TRANSFER Planning for the potential cost of freezing surplus embryos, if this isn't included in your treatment package. Having frozen embryos means you may be able to have further frozen embryo transfer treatment without repeating all the medical steps or paying for a full treatment cycle. For many patients, this offers the best chance to grow or complete their family. Please note that freezing does not include ongoing storage costs, which are charged separately — see below for details.	£375.00
STORAGE OF FROZEN EMBRYOS (WHEN PAID BY MONTHLY DIRECT DEBIT)	£35.42
STORAGE OF FROZEN EMBRYOS (ANNUAL CHARGE)	£425.00

PAYMENT

PAYMENT OPTIONS

Treatment fees are paid before the treatment starts. Bank transfer, debit and credit cards are accepted methods of payment. Our preferred method is by debit card.

In cases where your health insurance may fund consultations and investigations, you must pay the fees directly to Care Fertility and then claim the cost back from your insurer. We are unable to negotiate claims directly with health insurers.

Care Fertility reserves the right to amend prices. If you have a consultation with Care Fertility and agree to a recommended course of treatment, we will provide you with a fully costed treatment plan and an invoice that sets out the cost of the medications we recommend. Once the treatment and medication invoices are paid, we will provide treatment for the agreed price, which will not change unless we give you six months notice. If we implement price changes before you have paid your invoices for treatment then we will provide you with an updated costed treatment plan and invoices so that we can expressly agree the cost of treatment with you before you enter into a contract with Care Fertility by paying for your treatment and medication.

Effective from 1 January 2026.
