INITIAL CONSULTATION AND SCREENING

PRE-TREATMENT BUNDLE

Includes the key tests to understand your fertility, so your doctor can review everything at your consultation and help you move forward sooner.	£575.00
What's included: - Initial treatment consultation - Semen analysis (if required) - Pre-treatment scan with antral follicle count - Blood tests: Anti-Mullerian Hormone (AMH), full blood count (FBC), vitamin D, thyroid stimulating hormone (TSH), and blood glucose (HbA1c)	

INITIAL TREATMENT CONSULTATION

Your initial consultation will be booked for 45 minutes and your consultant will review your medical history and the results of your fertility investigations. At the end of the consultation, they will recommended an individualised treatment plan or recommend additional tests.	£275.00
Please note: If you need extra tests there will be additional cost and your consultant may not be able to provide a full treatment plan until the test results are known.	

RECOMMENDED SCREENING

If you've had an AMH, TSH, a vitamin D blood test, or a scan within the last six months, or a diagnostic semen analysis within the last year, you can share the results with your chosen Care Fertility clinic. These tests won't usually need to be repeated.	
--	--

IF YOU ARE PROVIDING SPERM FOR TREATMENT:

Diagnostic Semen Analysis	£250.00
---------------------------	---------

IF YOU ARE PROVIDING EGGS FOR TREATMENT:

Detailed pre-treatment scan – including antral follicle count (AFC)	£300.00
Anti-Mullerian Hormone (AMH) level blood test	£175.00
Thyroid stimulating hormone blood (TSH) test	£64.00
Vitamin D level blood test	£84.00
Blood glucose (HbA1C)	£52.00
Full blood count (FBC)	£52.00

FERTILITY ASSESMENTS

FERTILITY ASSESMENTS	
FEMALE FERTILITY ASSESSMENT FOR SINGLE FEMALES Includes results appointment, ultrasound scan, and AMH blood test.	£365.00
MALE FERTILITY ASSESSMENT FOR SINGLE MALES Includes results appointment and semen analysis check.	£365.00
SAME SEX FEMALE COUPLES FERTILITY ASSESSMENT Includes results appointment, ultrasound scan x 2, and AMH blood test x2.	£465.00
COUPLES FERTILITY ASSESSMENT Includes results appointment, ultrasound scan, semen analysis, and AMH blood test.	£465.00
PRE-TREATMENT ASSESSMENT TOP UP Includes doctor consult, full blood count, thyroid stimulating hormone blood test, Vitamin D level blood test and HbA1C diabetes level check.	£260.00

INTRAUTERINE INSEMINATION (IUI)

INTRAUTERINE INSEMINATION (IUI) WITH PARTNER OR DONATED SPERM

IUI TREATMENT

£1,350.00

The cost includes nurse-led planning, monitoring scans, sperm preparation, insemination, a pregnancy scan or post-treatment review appointment, and access to counselling support.

The cost of donor sperm is not included. See below for details on the cost of purchasing sperm from the Care Fertility sperm bank or transferring sperm from a partner sperm bank.

ESTIMATED DRUG COSTS IN A MEDICATED OR STIMULATED CYCLE

IUI may be unstimulated or stimulated. The type of cycle we recommend for you will depend on your medical history and the results of tests carried out as part of your pre-treatment planning. The typical cost of medications for an unstimulated cycle is £104. Whilst the cost of medications for a stimulated cycle generally ranges from £139 to £583.

HFEA FEE

£45.00

Only applicable if using donated sperm

IN VITRO FERTILISATION (IVF)

IN VITRO FERTILISATION (IVF)

IVF WITH FRESH EMBRYO TRANSFER The cost includes nurse-led planning with one of our fertility specialists, monitoring scans and blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and extended culture, and a fresh embryo transfer. It also includes a pregnancy scan or post-treatment review appointment, as well as access to counselling support.	£4,950.00
ESTIMATED DRUG COSTS The cost of medications for a fresh IVF cycle ranges between £1,121 and £2,973. The exact cost depends on the recommended dose, which is tailored to each patient based on their individual medical history and blood test results. 79% of patients have medication costs between £1,121 and £2,165. We'll always confirm the exact cost of your medication before you decide to start treatment. Up to one third of women may develop OHSS during stimulation; if this occurs additional medications may be required to reduce the severity of this. These additional medications may cost up to £406. If a fresh embryo transfer leads to a pregnancy, you will need additional luteal support (progesterone). The typical cost of this is £125.	
INTRACYTOPLASMIC SPERM INJECTION (ICSI) ICSI is required if the results of the diagnostic semen analysis or previous treatment history indicate it is needed.	£1,500.00
IVF USING OWN FROZEN EGGS The cost includes nurse consultation, monitoring scans, thawing of eggs, sperm preparation, ICSI, embryo culture, embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.	£4,455.00

IN VITRO FERTILISATION (IVF)

IN VITRO FERTILISATION

IVF WITH ELECTIVE FREEZING OF ALL EMBRYOS

£5,050.00

The cost includes nurse-led planning with one of our fertility specialists, monitoring scans and blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, freezing of all embryos, one year's embryo storage, and access to counselling support.

The cost of a frozen embryo transfer is **not included**.

ESTIMATED DRUG COSTS

Patients having a transfer using embryos created from frozen eggs are typically prescribed medication costing between £179 and £500 to prepare the womb for transfer. If the treatment leads to a pregnancy, you will need additional medication. The typical cost for this is £350.

Our research shows that around 33% of patients don't absorb enough progesterone from pessaries alone. In these cases, we recommend injectable progesterone, known as rescue luteal support. The typical cost of this extra progesterone is around £256 until the pregnancy test, and if the test is positive, it will need to be continued for several more weeks, at an additional cost of up to £896.

HFEA FEE

£115.00

EFA USING THAWED EGGS

£3,020.00

The cost includes a nurse planning appointment, monitoring scans, thawing of eggs, sperm preparation, ICSI, embryo culture including extended culture to blastocyst, freezing of embryos, and up to one year's storage.

IN VITRO FERTILISATION (IVF)

DUOSTIM

This treatment includes two rounds of ovarian stimulation, two egg retrievals and creation and freezing of all embryos in the same menstrual cycle followed by a single frozen embryo transfer.

£11,200.00

The cost covers nurse planning with one of our fertility specialists; monitoring scans, in-treatment blood tests, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, freezing of all embryos from both cycles and storage for one year, a single frozen embryo transfer, pregnancy scan or post-treatment review appointment and counselling support.

The cost of medication and ICSI (if required) is not included. All treatment incurs a fee payable to the HFEA and this fee is included in the package cost.

ESTIMATED DRUG COSTS

The cost of medications for each wave of stimulation in a DuoStim cycle ranges from between £1,145 and £2,752. The exact cost depends on the recommended dose, which is tailored to each patient based on their individual medical history and blood test results.

Research shows that 79% of patients have medication costs between £1,1467 and £1,994. We'll always confirm the exact cost of your medication before you decide to start treatment.

Up to one third of women may develop OHSS during stimulation; if this occurs additional medications may be required to reduce the severity of this. These additional medications may cost up to £406.

FROZEN EMBRYO TRANSFER MEDICATION COSTS

Patients having a transfer using frozen embryos are typically prescribed medication costing between £179 and £500 to prepare the womb for transfer. If the treatment leads to a pregnancy, you will need additional medication. The typical cost for this is £350.

Our research shows that around 33% of patients don't absorb enough progesterone from pessaries alone. In these cases, we recommend injectable progesterone, known as rescue luteal support. The typical cost of this extra progesterone is around £256 until pregnancy test and if the test is positive, it will need to be continued for several more weeks, at an additional cost of up to £896.

IN VITRO FERTILISATION (IVF)

DUOSTIM

INTRACYTOPLASMIC SPERM INJECTION (ICSI) (PER STIMULATION) ICSI is required in each round of stimulation if the results of the diagnostic semen analysis or previous treatment history indicate it is needed.	£1,500.00
---	-----------

TREATMENT PACKAGES

CARE VALUE PACKAGE

CARE VALUE IVF PACKAGE

This treatment plan offers the core elements of IVF at a more accessible price, subject to eligibility criteria.

The Care Value IVF package includes a nurse-led consultation and planning appointment with a fertility nurse specialist, monitoring scans, blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation, and ‘do not disturb’ embryo culture. It also includes a fresh embryo transfer and freezing of any suitable surplus embryos.

The cost also includes fertility medication, a pregnancy scan or post-treatment review appointment, and access to counselling support. Ongoing embryo storage is not included and is charged separately.

£3,500.00

CARE VALUE IVF WITH ICSI

£4,500.00

HFEA FEE

£115.00

TREATMENT PACKAGES

CARE ENHANCED PACKAGE

2 CYCLE ENHANCED IVF PACKAGE

For each embryo-banking cycle, the package includes nurse-led planning with one of our fertility specialists, monitoring scans, blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, PGT-A, Caremaps AI, freezing of all embryos, one year's embryo storage, and access to counselling support.

The package also includes one frozen embryo transfer, covering embryo thawing, culture, and transfer, along with a pregnancy scan or post-treatment review appointment and counselling support.

£16,175.00

2 CYCLE ENHANCED IVF PACKAGE - INCLUDING INTRACYTOPLASMIC SPERM INJECTION (ICSI)

ICSI is required if the results of the diagnostic semen analysis or previous treatment history indicate it is needed.

£18,450.00

3 CYCLE ENHANCED IVF PACKAGE

For each embryo-banking cycle, the package includes nurse-led planning with one of our fertility specialists, monitoring scans, blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, PGT-A, Caremaps AI, freezing of all embryos, one year's embryo storage, and access to counselling support.

The package also includes one frozen embryo transfer, covering embryo thawing, culture, and transfer, along with a pregnancy scan or post-treatment review appointment and counselling support.

£19,950.00

3 CYCLE ENHANCED IVF PACKAGE - INCLUDING INTRACYTOPLASMIC SPERM INJECTION (ICSI)

ICSI is required if the results of the diagnostic semen analysis or previous treatment history indicate it is needed.

£22,250.00

TREATMENT PACKAGES

CARE ENHANCED PACKAGE

ESTIMATED DRUG COSTS

The cost of medications for an elective freeze all cycle ranges from between £1,021 and £2,873. The exact cost depends on the recommended dose, which is tailored to each patient based on their individual medical history and blood test results. Research shows that 79% of patients have medication costs between £1,021 and £2,065. We'll always confirm the exact cost of your medication before you decide to start treatment.

Up to one third of women may develop OHSS during stimulation; if this occurs additional medications may be required to reduce the severity of this. These additional medications may cost up to £406.

Patients having a transfer using a frozen embryo are typically prescribed medication costing between £179 and £500 to prepare the womb for transfer. If the treatment leads to a pregnancy, you will need additional medication. The typical cost for this is £350.

TREATMENT PACKAGES

CARE ADVANCED PACKAGE

2 CYCLE ADVANCED IVF PACKAGE

For each IVF cycle, the package includes nurse-led planning with one of our fertility specialists, monitoring scans, blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, PGT-A, Caremaps AI, freezing of all embryos, one year's embryo storage, one ERA, and access to counselling support.

The package also includes one frozen embryo transfer, covering embryo thawing, culture, and transfer, along with a pregnancy scan or post-treatment review appointment and counselling support.

£17,250.00

2 CYCLE ADVANCED IVF PACKAGE - INCLUDING INTRACYTOPLASMIC SPERM INJECTION (ICSI)

ICSI is required if the results of the diagnostic semen analysis or previous treatment history indicate it is needed.

£19,575.00

3 CYCLE ADVANCED IVF PACKAGE

For each IVF cycle, the package includes nurse-led planning with one of our fertility specialists, monitoring scans, blood tests during treatment, sperm preparation, egg collection with conscious sedation or local anaesthetic, embryo creation and culture, PGT-A, Caremaps AI, freezing of all embryos, one year's embryo storage, one ERA, and access to counselling support.

The package also includes one frozen embryo transfer, covering embryo thawing, culture, and transfer, along with a pregnancy scan or post-treatment review appointment and counselling support.

£21,250.00

3 CYCLE ADVANCED IVF PACKAGE - INCLUDING INTRACYTOPLASMIC SPERM INJECTION (ICSI)

ICSI is required if the results of the diagnostic semen analysis or previous treatment history indicate it is needed.

£23,450.00

HFEA FEE

£115.00

GENETIC TESTING

PREIMPLANTATION GENETIC TESTING (PGT-A)

This optional embryo selection treatment is recommended to patients where the eggs for treatment are provided by someone aged over 36 or to patient couples who have experienced recurrent miscarriage. PGT-A can only be provided in an elective freeze all IVF treatment cycle.

INITIAL GENETICS COUNSELLING APPOINTMENT

£305.00

FOLLOW UP GENETICS COUNSELLING APPOINTMENT

£155.00

PGT-A (WITHIN A TREATMENT CYCLE)

PGT-A FEE

£1,445.00

The fee includes treatment set up, biopsy set up and Caremaps Ai. Extended culture and ICSI (if required) are not included in the fee.

PGT-A FEE PER EMBRYO BIOPSIED

£395.00

PGT-A (TESTING OF PREVIOUSLY FROZEN EMBRYOS)

EMBRYO THAW, BIOPSY, AND REFREEZE

£1,375.00

fee includes embryo thaw, treatment set up, biopsy set up.

PGT-A FEE PER EMBRYO BIOPSIED

£395.00

SUPPLEMENTARY PROCEDURES

IVF RELATED SUPPLEMENTARY PROCEDURES

Although not required, we recommend that all patients having IVF consider including the following options in their treatment plan:

EXTENDED CULTURE AND BLASTOCYST TRANSFER

We will add this to your protocol unless you opt-out.

£575.00

CAREMAPS AI

You can find information about our exclusive embryo selection algorithm on our website and in written information available from your chosen Care Fertility Clinic.

£1,075.00

FREEZING OF EMBRYOS REMAINING AFTER FRESH EMBRYO TRANSFER

We recommend planning for the potential cost of freezing surplus embryos. Having frozen embryos means you may be able to have further frozen embryo transfer treatment without repeating all the medical steps or paying for a full treatment cycle.

£565.00

For many patients, this offers the best chance to grow or complete their family. Please note that freezing does not include ongoing storage costs, which are charged separately – see below for details.

STORAGE OF FROZEN EMBRYOS (ANNUAL CHARGE)

£425.00

STORAGE OF FROZEN EMBRYOS (WHEN PAID BY MONTHLY DIRECT DEBIT)

£35.42

FROZEN EMBRYO TRANSFER

FROZEN EMBRYO TRANSFER (FET)

The cost includes nurse-led planning, monitoring scans, blood tests during treatment, embryo thawing, culture, and transfer, a pregnancy scan or post-treatment review appointment, and access to counselling support.

£2,900.00

HFEA FEE

£115.00

SUPPLEMENTARY PROCEDURES

SUPPLEMENTARY PROCEDURES

CONSCIOUS SEDATION FOR EMBRYO TRANSFER The sedation cost at egg collection is included within the relevant treatment fee, a patient rarely requires sedation for the embryo transfer, and so this is not included in the treatment fee.	£395.00
--	---------

COUNSELLING (PER SESSION) Up to three optional counselling sessions are included in treatment costs. Counselling is only payable if accessing more than three sessions.	£85.00
---	--------

CYCLE MONITORING Includes all scans required for timed intercourse treatment.	£790.00
--	---------

FERTILITY PRESERVATION

FREEZING AND STORAGE OF EGGS OR SPERM

All patients freezing eggs or sperm must have standard infectious screening tests unless they can provide the results of tests from three months before freezing. UK law requires infectious screening at the time of freezing if future surrogacy treatment is planned or likely – your clinic can share these costs once future treatment plans are known.

EGG FREEZE MULTICYCLE – A COLLECTION OF UP TO 20 EGGS GATHERED OVER UP TO FOUR CYCLES

£7,995.00

The cost includes nurse-led planning, monitoring scans, blood tests during treatment, egg collection with conscious sedation or local anaesthetic, egg freezing, access to counselling support, and one year’s egg storage.

The cost of the initial consultation and pre-treatment screening tests is not included.

Medication costs are charged separately and are per treatment cycle. The cost of medications to freeze eggs typically ranges from between £1,021 and £2,873. The exact cost depends on the recommended dose, which is tailored to each patient based on their individual medical history and blood test results. 79% of patients have medication costs between £1021 and £2065. We'll always confirm the exact cost of your medication before you decide to start treatment.

Up to one third of women may develop OHSS during stimulation; if this occurs additional medications may be required to reduce the severity of this. These additional medications may cost up to £406.

FERTILITY PRESERVATION

FREEZING AND STORAGE OF EGGS OR SPERM

EGG FREEZE SINGLE CYCLE

£3,525.00

The cost includes nurse-led planning, monitoring scans, blood tests during treatment, egg collection with conscious sedation or local anaesthetic, egg freezing, and access to counselling support.

The cost of the consultation, pre-treatment screening tests, and ongoing storage is not included.

The cost of medications to freeze eggs typically ranges from between £1,021 and £2,873. The exact cost depends on the recommended dose, which is tailored to each patient based on their individual medical history and blood test results. 79% of patients have medication costs between £1,021 and £2,065. We'll always confirm the exact cost of your medication before you decide to start treatment.

Up to one third of women may develop OHSS during stimulation; if this occurs additional medications may be required to reduce the severity of this. These additional medications may cost up to £406.

SPERM FREEZE PER SAMPLE

£135.00

The cost includes consent planning, sperm freezing and counselling support. The cost of consultation, pre-treatment screening tests and ongoing storage are not included.

STORAGE OF FROZEN SPERM/EGGS (ANNUAL CHARGE)

£425.00

STORAGE OF FROZEN SPERM/EGGS (MONTHLY DIRECT DEBIT)

£35.42

TRANSFER OF SPERM/EGGS/EMBRYOS STORED AT CARE FERTILITY TO AN OVERSEAS CLINIC Patients are responsible for payment of fees charged by couriers for the movement of sperm, eggs, or embryos	£1,170.00

ADDITIONAL INFORMATION

PAYMENT OPTIONS

Treatment fees are paid before the treatment starts. Bank transfer, debit and credit cards are accepted methods of payment. Our preferred method is by debit card.

In cases where your health insurance may fund consultations and investigations, you must pay the fees directly to Care Fertility and then claim the cost back from your insurer. We are unable to negotiate claims directly with health insurers.

Care Fertility reserves the right to amend prices. If you have a consultation with Care Fertility and agree to a recommended course of treatment, we will provide you with a fully costed treatment plan and an invoice that sets out the cost of the medications we recommend. Once the treatment and medication invoices are paid, we will provide treatment for the agreed price, which will not change unless we give you six months notice. If we implement price changes before you have paid your invoices for treatment then we will provide you with an updated costed treatment plan and invoices so that we can expressly agree the cost of treatment with you before you enter into a contract with Care Fertility by paying for your treatment and medication.

Effective from 1 January 2026.

FEES FOR DONATION, SURROGACY, AND GENETIC TESTING

Some treatments and services have more individual costs. Fees for donation treatments, surrogacy, and genetic testing aren't listed in this schedule, as they can vary depending on your circumstances and treatment plan.

You'll find full, up-to-date pricing for these services on our website. If you'd rather talk it through, our patient enquiry team is always happy to explain what's included and help you understand what to expect before you decide on next steps.

CANCELLATION FEES AND REFUNDS

Occasionally a treatment cycle must be cancelled. Depending on where you are in your treatment cycle, you may either be charged a cancellation fee or receive a refund amount. For more information please refer to the cancellation fees and refunds information on our website
